

# SecurID Tokens

*A strong security solution to protect OnLine account information.*

## What are SecurID Tokens

- Small devices in the form of a key fob that gives the owner a new password every 60 seconds
- The password and PIN improve the security of your computer and network and are required to access your OnLine Banking system
- Are designed to defeat key logging and other forms of hacking by using “two-factor authentication”.

## The benefits of SecurID Tokens

- Peace of mind - from knowing that access to your information is more secure and only authorized persons can access your network.
- Simplicity - you carry only a small SecurID Token

## More about two-factor authentication

Two-factor authentication provides a user with a personal identification number (PIN), which authorizes them as the owner of that particular device; then displays a number which uniquely identifies the user to the service, allowing them to log in. Even if the security token falls into the wrong hands, however, it can't be used to gain access because the PIN (which only the rightful user knows) is also needed.
